

Superior Precision.

The Electronic Ring Gauge made by the STI

- ✦ Rapid measurement
- ✦ High precision
- ✦ Pinpoint accuracy – even with wide band and convex rings
- ✦ No damage to the rings
- ✦ No wear and tear to the measuring equipment
- ✦ Convertible to different global ring sizes

The electronic ring gauge stands out from conventional measurement systems through its superior precision. In particular the precision of the electronic ring gauge makes it an essential tool which will not wear out over time. An important feature is that the ring will not be scratched during the measuring process. All the various geometries of a ring can be measured with the same tool and converted to different global ring sizes (USA, Germany, France, United Kingdom and Japan).
